HTML/CSS Lesson Plans

Piero Guerra- Wednesday &/or Friday
Imad Shaikh- Friday

When we are here,- use repl.it
When absent- use Khan academy and any unfinished assignments on repl.it

Week 1- Teaching the basics of HTML, how to code small paragraphs using <br>, <p> <body>

Week 2- Write poem-sized paragraphs using <strong> tags and <br> tags. If able to, change the background color using <style tags>

Week 3- Create a list of 2 items, using <ul> to organize chronologically, and <ul> to use bullet points. Use <li> to call the code.

What we hope to achieve in the future:

- All students can read and write basic HTML/CSS
- Students will be able to use style tags to customize their web designs.
- Students will (at some point) create their own website

*If you ever miss any of the classes, the assignments will always be up to date.
